Why Samarth?

Cross-Domain Analysis

Correlate agricultural production with climate patterns to understand dependencies and derive actionable insights.

Source Attribution

Every claim is backed by citations to official government data sources, ensuring accuracy and traceability.

Why Samarth?

Welcome to Samarth

Ask questions about agricultural production, crop yields, and climate patterns across Indian states. Get data-backed answers with proper citations.

Compare the average annual rainfall in Punjab and Maharashtra for the last 2 years.

What are the top crops produced in Uttar Pradesh in 2023?

Analyze the rainfall patterns in Karnataka during the monsoon season.

How has wheat production changed in Punjab from 2022 to 2023?

[Send](#)

Data sources: Ministry of Agriculture & Farmers Welfare, India Meteorological Department

How has wheat production changed in Punjab from 2022 to 2023?

1. **Change in Wheat Production from 2022 to 2023:**

Wheat production in Punjab increased from 4,800,000 tonnes in 2022 to 5,000,000 tonnes in 2023, marking an increase of 200,000 tonnes or approximately 4.17% [Source: Ministry of Agriculture & Farmers Welfare - Agricultural Statistics].

2. **Key Statistics and Comparisons:**

- **Production:** Increased from 4,800,000 tonnes in 2022 to 5,000,000 tonnes in 2023.
- **Area Harvested:** Remained constant at 1,200,000 hectares for both years.
- **Yield per Hectare:** Increased from 4.00 tonnes/hectare in 2022 to 4.17 tonnes/hectare in 2023, indicating an improvement in productivity [Source: Ministry of Agriculture & Farmers Welfare - Agricultural Statistics].

3. **Trends and Patterns:**

- The yield improvement suggests better management or agricultural practices in 2023 compared to 2022, as the area harvested did not change but production increased.
- The increase in production aligns with a general trend towards improving agricultural efficiency in the region, indicated by the rise in yield.

4. **Data Sources and Citations:**

- All data points and claims are derived from the Ministry of Agriculture & Farmers Welfare, specifically the "Agricultural Statistics" dataset for Punjab [Source: Ministry of Agriculture & Farmers Welfare - Agricultural Statistics].

5. **Limitations and Caveats:**

- The analysis only applies to the district of Ludhiana in Punjab; while a part of the data aggregates for the state, regional variance within Punjab may exist.
- No climate data is available to correlate weather-related influences on production trends. This absence could limit understanding of environmental impacts on crop yields.
